Summary

DBAnvil

This is an analytics reporting deck developed in PowerBI for the DBAnvil data modeler platform. It was created purely to demonstrate an end-to-end data pipeline for a real product.
The DBAnvil OLTP database is hosted in Supabase. A python ELT pipeline is used to pull diagram data into a Snowflake DW. The data is then cleaned and transformed using dbt modeling and CI/CD.
Airflow is used to orchestrate the entire process. Hosted locally using WSL2.

Diagrams	Tables	Columns	Indexes	Users	Index Columns
